1) The nominal proportioning rate is achieved when reaching the specified minimum figure. Indication for proportioning of fluid Newtonian foam agents at operating pressure of 5 bar. For more detailed information, refer to page 2, item 3. "Minimum water flow rate".

2) Operating temperature is the maximum ambient and medium (foam and extinguishing water) temperature. Maximum foam agent temperature is generally limited to 50 °C.

3) Weight indications are based upon the standard version in dry condition. Special versions will differ.

x) Optional equipment.

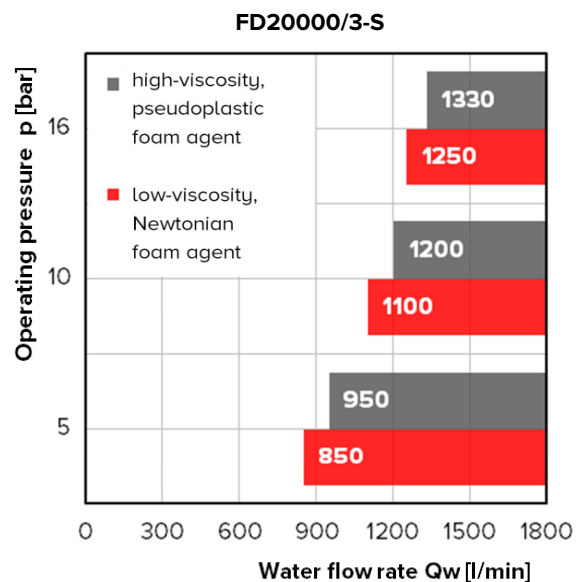

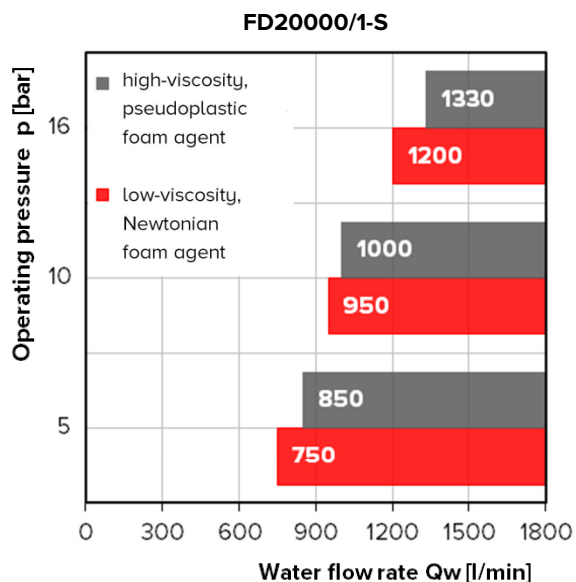

2. PRESSURE LOSS

Indication valid for operating pressure of 10 bar. For more information on different system conditions, please contact us.

3. MINIMUM WATER FLOW RATE

The following diagrams show the effect of the operating pressure and foam agent viscosity on the minimum water flow rate.

Comment: The values specified for the minimum extinguishing water flow rate increase by approx. 25% in the high-temperature version. The specified figures apply for the foam agent viscosity range stated in paragraph 4 only.

4. FOAM AGENT VISCOSITY

FireDos proportioners are suitable for all foam agents available on the market. For your reference, please find the corresponding (associated) range of dynamic viscosity below. Contact us if the dynamic viscosity of your foam agent is higher than the values in the diagram. **Do not hesitate to request our support for the correct dimensioning of your suction line.**
